EDUCATION

Vellore Institute of Technology - BTech in Computer Science & Engineering

Aug 2023 – Expected 2027

TECHNICAL SKILLS

AI / ML: Python, PyTorch, TensorFlow, Scikit-learn, NLP, LLMs, Transformers, Speech Recognition, Deep Learning, Neural Networks, Prompt Engineering, Hugging Face, LangChain, RAG, Fine-tuning, Vector Databases

Development & Design: React.js, Next.js, TypeScript, Node.js, Tailwind CSS, HTML/CSS, Figma, UI/UX Design, REST API Integration

Tools: Git, GitHub, Jupyter Notebook, VS Code, Vercel, Prompt Engineering

EXPERIENCE

AI & ML Intern - Revolut Labs Private Limited, Bangalore

May 2026 – Present

- Building and iterating on an AI-powered voice assistant pipeline, integrating speech recognition, NLP, and LLM-based response generation to enable natural, hands-free conversational interactions.
- Applying ML techniques and prompt engineering to optimize voice agent accuracy and response quality; contributing to model evaluation and iterative performance improvements in a fast-paced AI product environment.

Product Developer - SilicoScientia, Bangalore

Mar 2025 – Jul 2025

- Developed data-driven UX for computational drug discovery tools; simplified molecular docking workflows adopted by research institutions and academic labs.
- Delivered structured dashboards and scientific data visualizations improved platform usability by **60%** and reduced analysis workflow time by **40%**.

Product Designer - AIKO, Chennai

Apr 2024 – Mar 2025

- Designed a cross-platform AI-powered app combining Generative AI, gamification, and cognitive learning boosted user engagement by **45%**.
- Led data-informed design iterations, translating user behaviour insights into product improvements that increased average session duration.

PROJECTS

Explainable Hybrid Clinical Decision Support System (CDSS)

[Project Link](#)

Python | Scikit-learn | MIMIC Datasets | XAI

- Built a hybrid CDSS combining Logistic Regression, Random Forest, and Decision Tree with rule-based clinical reasoning on MIMIC-III/IV and UCI datasets; evaluated on Accuracy, Precision, Recall, and F1-Score directly applicable to data analytics and AI reporting workflows.
- Developed an explainability layer providing feature level insights and rule-based justifications, reducing false-positive alerts and improving interpretability of model outputs for practical decision-making.

Terminal Voice Agent – Hands-Free AI Coding Interface

[Project Link](#)

Python | Speech Recognition | LLM Integration | CLI

- Built a fully hands-free voice interface for AI terminal coding agents, enabling real-time speech-to-command execution — eliminating keyboard dependency for developer workflows.
- Integrated speech recognition with LLM-backed command interpretation; optimized latency and accuracy of voice-to-action pipeline, gaining hands-on experience in end-to-end voice AI system design.

Breast Cancer Classification - Deep Learning (BreakHis Dataset)

[Project Link](#)

PyTorch | ViT | SHAP | Grad-CAM

- Benchmarked five deep learning architectures (ResNet50, VGG16, MobileNetV2, Custom CNN, Vision Transformer) on 7,909 histopathology images ViT achieved **93.4% accuracy**; MobileNetV2 provided best efficiency/accuracy balance.
- Applied SHAP and Grad-CAM for model explainability, extracting clinical insights from AI predictions equivalent to AI-assisted data reporting and interpretability in business contexts.

YourFirstStep - Career Guidance Platform

[Project Link](#)

Next.js | TypeScript | Node.js | API Integration

- Built a full-stack career guidance platform using Next.js, TypeScript, and Node.js, implementing a zero-latency client-side assessment engine with dynamic result dashboards and reusable UI components deployed on Vercel with optimized client-side rendering for near-instant feedback.
- Designed a modular architecture using the Next.js App Router and serverless API routes, enabling scalable integration with external services such as LinkedIn and job market APIs; improved response efficiency and supported concurrent user interactions.
